

CHURCH HOUSE BUILDING SERVICES

Western International Park

Located on the site of the previous Western International Market, the development consists of three large warehouse/industrial units, the largest having a floor area of 14,000m². Each unit will incorporate a two storey air conditioned office building

In order to satisfy the requirements of the Planning Authority, we have undertaken a detailed assessment of the energy requirements of the buildings and the options available to meet the criteria. The targets to be achieved have been established as being capable of being satisfied by the use of air source heat pumps incorporated into the design of the office accommodation air conditioning installations
